Screen Shots

TC001

Title: Create a Simple Form

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and click on the "Create New Form" button.
2. Enter a valid form name and description.
3. Add a text field with a label and a required checkbox.

Expected Result: The form is successfully created and displayed in the Form Builder list.

TC002

Title: Create a Form with a Data Source

Preconditions: User has access to the Data Source module and is logged in with a valid role.

Steps:

1. Navigate to the Data Source module and create a new data source with a valid connection.
 2. Navigate to the Form Builder module and create a new form.
 3. Add a data source field to the form and select the previously created data source.
- Expected Result: The form is successfully created and the data source field is populated with data.

TC003

Title: Create a Recursive Form

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add a field that references another form in the same module.
3. Save the form and navigate to the referenced form.

Expected Result: The referenced form is successfully loaded and displayed

TC004

Title: Validate Mandatory Fields

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add a text field with a label and a required checkbox.
3. Attempt to save the form without entering a value in the text field.

Expected Result: The form is not saved and an error message is displayed indicating that the field is required.

TC005

Title: Test Role-Based Access Control

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Create a new form and add a field that is only accessible to users with a specific role.
2. Log in with a user account that does not have the required role.
3. Attempt to access the form and the restricted field.

Expected Result: The form is displayed but the restricted field is not accessible.

TC006

Title: Test Data Source Behavior

Preconditions: User has access to the Data Source module and is logged in with a valid role.

Steps:

1. Create a new data source with a valid connection.
2. Navigate to the Form Builder module and create a new form.
3. Add a data source field to the form and select the previously created data source.
4. Attempt to save the form with an invalid data source connection.

TC007

Title: Test Corrective Actions

Preconditions: User has access to the Activity Management module and is logged in with a valid role.

Steps:

1. Create a new activity with a corrective action.
2. Navigate to the Form Builder module and create a new form.
3. Add a field that triggers the corrective action.
4. Save the form and attempt to trigger the corrective action.

Expected Result: The corrective action is successfully triggered and executed.

TC008

Title: Test Views and Data Visualization

Preconditions: User has access to the Views module and is logged in with a valid role.

Steps:

1. Create a new view with a valid configuration.
2. Navigate to the Form Builder module and create a new form.
3. Add a field that is linked to the previously created view.
4. Save the form and attempt to view the data in the linked view.

Expected Result: The data is successfully displayed in the linked view.

TC009

Title: Test Sharing and Access Control

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Create a new form and share it with a user account that does not have access to the Form Builder module.
2. Log in with the shared user account and attempt to access the shared form.

TC010

Title: Test Navigation and UI Behavior

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add multiple fields to the form and save it.
3. Attempt to navigate to a different module while the form is still open.

Expected Result: The form is successfully saved and the user is redirected to the desired module.

✓ Finished in 5.9s

TC001 Title: Form Builder - Create New Form Preconditions: The user is logged in and has the necessary permissions to create a new form. Steps:

1. Navigate to the Form Builder page.
2. Click on the "Create New Form" button.
3. Fill in the required fields (form title, description, etc.).
4. Click on the "Save" button. Expected Result: A new form is successfully created and displayed on the Form Builder page.

ISSUES:

- The test case is too vague and lacks specific details.
- The preconditions are not clearly defined.
- The steps are not detailed enough.

SUGGESTIONS:

- Add more specific details to the test case, such as the expected behavior of the "Create New Form" button.
- Define the expected permissions required to create a new form.
- Break down the steps into more granular actions.

IMPROVED TEST CASE:

TC001 Title: Form Builder - Create New Form Preconditions: The user is logged in with the role of "Administrator" and has the permission to create new forms. Steps:

1. Log in to the application with the username "admin" and password "password123".
2. Navigate to the Form Builder page by clicking on the "Forms" tab in the top navigation menu.
3. Click on the "Create New Form" button located in the top right corner of the page.
4. Fill in the required fields: form title "Test Form", description "This is a test form", and select the form type "Survey".
5. Click on the "Save" button to create the new form. Expected Result: A new form is successfully created and displayed on the Form Builder page with the title "Test Form" and description "This is a test form".

TC002 Title: Form Builder - Edit Existing Form Preconditions: The user is logged in and has the necessary permissions to edit existing forms. Steps:

1. Navigate to the Form Builder page and select an existing form to edit.
2. Click on the "Edit" button located next to the form title.
3. Make changes to the form fields: update the form title to "Updated Test Form" and description to "This is an updated test form".
4. Click on the "Save" button to update the form. Expected Result: The form is successfully updated with the new title and description.

ISSUES:

- The test case is too vague and lacks specific details.
- The preconditions are not clearly defined.

SUGGESTIONS:

- Add more specific details to the test case, such as the expected behavior of the "Edit" button.
- Define the expected permissions required to edit existing forms.

IMPROVED TEST CASE:

TC002 Title: Form Builder - Edit Existing Form Preconditions: The user is logged in with the role of "Editor" and has the permission to edit existing forms. Steps:

1. Log in to the application with the username "editor" and password "password123".
2. Navigate to the Form Builder page and select the form "Test Form" to edit.
3. Click on the "Edit" button located next to the form title.
4. Make changes to the form fields: update the form title to "Updated Test Form" and description to "This is an updated test form".
5. Click on the "Save" button to update the form. Expected Result: The form is successfully updated with the new title and description.

I passed below test cases as a input

TC001

Title: Create a Simple Form

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and click on the "Create New Form" button.
2. Enter a valid form name and description.
3. Add a text field with a label and a required checkbox.

Expected Result: The form is successfully created and displayed in the Form Builder list.

TC002

Title: Create a Form with a Data Source

Preconditions: User has access to the Data Source module and is logged in with a valid role.

Steps:

1. Navigate to the Data Source module and create a new data source with a valid connection.
2. Navigate to the Form Builder module and create a new form.
3. Add a data source field to the form and select the previously created data source.

Expected Result: The form is successfully created and the data source field is populated with data.

TC003

Title: Create a Recursive Form

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add a field that references another form in the same module.
3. Save the form and navigate to the referenced form.

Expected Result: The referenced form is successfully loaded and displayed.

TC004

Title: Validate Mandatory Fields

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add a text field with a label and a required checkbox.
3. Attempt to save the form without entering a value in the text field.

Expected Result: The form is not saved and an error message is displayed indicating that the field is required.

TC005

Title: Test Role-Based Access Control

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Create a new form and add a field that is only accessible to users with a specific role.
2. Log in with a user account that does not have the required role.
3. Attempt to access the form and the restricted field.

Expected Result: The form is displayed but the restricted field is not accessible.

TC006

Title: Test Data Source Behavior

Preconditions: User has access to the Data Source module and is logged in with a valid role.

Steps:

1. Create a new data source with a valid connection.
2. Navigate to the Form Builder module and create a new form.
3. Add a data source field to the form and select the previously created data source.
4. Attempt to save the form with an invalid data source connection.

Expected Result: The form is not saved and an error message is displayed indicating that the data source connection is invalid.

TC007

Title: Test Corrective Actions

Preconditions: User has access to the Activity Management module and is logged in with a valid role.

Steps:

1. Create a new activity with a corrective action.

2. Navigate to the Form Builder module and create a new form.
3. Add a field that triggers the corrective action.
4. Save the form and attempt to trigger the corrective action.

Expected Result: The corrective action is successfully triggered and executed.

TC008

Title: Test Views and Data Visualization

Preconditions: User has access to the Views module and is logged in with a valid role.

Steps:

1. Create a new view with a valid configuration.
2. Navigate to the Form Builder module and create a new form.
3. Add a field that is linked to the previously created view.
4. Save the form and attempt to view the data in the linked view.

Expected Result: The data is successfully displayed in the linked view.

TC009

Title: Test Sharing and Access Control

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Create a new form and share it with a user account that does not have access to the Form Builder module.
2. Log in with the shared user account and attempt to access the shared form.

Expected Result: The form is not accessible to the shared user account.

TC010

Title: Test Navigation and UI Behavior

Preconditions: User has access to the Form Builder module and is logged in with a valid role.

Steps:

1. Navigate to the Form Builder module and create a new form.
2. Add multiple fields to the form and save it.
3. Attempt to navigate to a different module while the form is still open.

Expected Result: The form is successfully saved and the user is redirected to the desired module.

TC002

Title: Form Builder - Edit Existing Form

Preconditions: The user is logged in with the role of "Editor" and has the permission to edit existing forms.

Steps:

1. Log in to the application with the username "editor" and password "password123".
2. Navigate to the Form Builder page and select the form "Test Form" to edit.
3. Click on the "Edit" button located next to the form title.
4. Make changes to the form fields: update the form title to "Updated Test Form" and description to "This is an updated test form".
5. Click on the "Save" button to update the form.

Expected Result: The form is successfully updated with the new title and description.

TC003

Title: Form Builder - Delete Existing Form

Preconditions: The user is logged in and has the necessary permissions to delete existing forms.

Steps:

1. Navigate to the Form Builder page and select an existing form to delete.
2. Click on the "Delete" button located next to the form title.
3. Confirm the deletion of the form by clicking on the "OK" button.

Expected Result: The form is successfully deleted and removed from the Form Builder page.

ISSUES:

- The test case is too vague and lacks specific details.
- The preconditions are not clearly defined.

SUGGESTIONS:

- Add more specific details to the test case, such as the expected behavior of the "Delete" button.
- Define the expected permissions required to delete existing forms.
